

SEO Audit Checklist

A practical guide to checking technical SEO, content quality, website visibility, and conversion performance.

Created by SEOREVIVE

How to use this checklist

Review each section, mark completed items, and record the issues that need attention. Fix the highest-impact problems first, then monitor changes in Google Search Console and your analytics platform.

1. Technical SEO and Indexing

Make sure search engines can crawl, understand, and index your important pages.

- ☐ Connect the website to Google Search Console.
- ☐ Check the Page Indexing report for excluded pages.
- ☐ Review the robots.txt file for accidental blocks.
- ☐ Confirm that important pages do not use a noindex tag.
- ☐ Submit and monitor the XML sitemap.
- ☐ Fix broken links, 404 errors, and server errors.
- ☐ Review canonical tags and duplicate URLs.
- ☐ Check redirects and remove unnecessary redirect chains.
- ☐ Confirm that Google can render important JavaScript content.

2. On-Page SEO

Each important page should clearly explain its topic and match the visitor's search intent.

- ☐ Write a unique, descriptive title for every important page.
- ☐ Create a useful meta description that encourages relevant clicks.
- ☐ Use one clear main heading on each page.
- ☐ Use subheadings to organise longer content.
- ☐ Place the main topic naturally in the introduction.
- ☐ Use descriptive image alt text where appropriate.
- ☐ Review URLs for clarity and unnecessary parameters.
- ☐ Match each page with informational, commercial, or transactional intent.
- ☐ Remove repeated, thin, or outdated content.

3. Content Quality

Useful content answers real questions, demonstrates experience, and gives the reader a clear next step.

- ☐ Answer the reader's main question clearly near the beginning.
- ☐ Use accurate and current information.
- ☐ Add original examples, explanations, or practical advice.
- ☐ Show relevant experience and trustworthy authorship.
- ☐ Break long sections into short paragraphs and lists.
- ☐ Add supporting images, examples, or data when useful.
- ☐ Update pages that contain outdated information.
- ☐ Combine or redirect pages that cover the same topic.
- ☐ Avoid adding words only to increase the article length.

4. Internal Linking

Internal links help visitors discover related information and help search engines understand your website structure.

- ☐ Link from blog posts to relevant service pages.
- ☐ Use descriptive anchor text instead of 'click here'.
- ☐ Link important pages from the navigation or other strong pages.
- ☐ Check for orphan pages with no internal links.
- ☐ Remove broken internal links.
- ☐ Avoid adding links that are unrelated to the page topic.

5. Website Speed and Mobile Experience

A website should load efficiently and remain easy to use on phones, tablets, and desktops.

- ☐ Test important pages on mobile devices.
- ☐ Review Core Web Vitals in Google Search Console.
- ☐ Compress large images and use suitable formats.
- ☐ Remove unused scripts, plugins, and styles.
- ☐ Check server response time and hosting performance.
- ☐ Make sure menus, forms, and buttons work on mobile.
- ☐ Prevent layout shifts while pages are loading.
- ☐ Check font size, contrast, and tap-target spacing.

6. Local SEO and Trust

Clear business information helps customers and search platforms understand who you are and where you operate.

- ☐ Keep your business name, address, and phone number consistent.
- ☐ Complete and verify your Google Business Profile.
- ☐ Add a clear About page and contact page.
- ☐ Display genuine team, author, or business information.
- ☐ Collect and respond to real customer reviews.
- ☐ Create useful location pages only when they provide unique value.
- ☐ Add privacy policy and terms pages.
- ☐ Link to genuine social profiles and business listings.

7. Backlinks and Off-Page SEO

The goal is to earn relevant, natural mentions rather than collect the largest possible number of links.

- ☐ Review links from irrelevant or suspicious websites.
- ☐ Watch for repeated exact-match anchor text.
- ☐ Check links from spam directories or hacked websites.
- ☐ Look for valuable mentions from relevant publications.
- ☐ Build relationships with genuine partners and local organisations.
- ☐ Do not buy links created only to manipulate rankings.
- ☐ Document significant link-building activities and outreach.

8. Conversion and Measurement

SEO should support meaningful business outcomes, not just higher rankings.

- ☐ Add one clear call to action to important pages.
- ☐ Make contact forms short and easy to use.
- ☐ Test phone, email, WhatsApp, and booking links.
- ☐ Track organic clicks and impressions.
- ☐ Track enquiries, calls, and form submissions.
- ☐ Measure conversions by landing page.
- ☐ Compare results before and after major SEO changes.
- ☐ Review which queries attract relevant visitors.

9. SEO Action Plan

Turn the audit into a prioritised plan that your team can actually implement.

- ☐ List every issue found during the audit.
- ☐ Classify each issue as high, medium, or low priority.
- ☐ Assign an owner and deadline to each task.
- ☐ Fix technical blockers before making minor content changes.
- ☐ Record what was changed and when.
- ☐ Monitor Search Console and analytics after implementation.
- ☐ Review the website again after major updates or redesigns.
